Templeton Global Bond Securities Fund

Investment Goal

High current income, consistent with preservation of capital. Capital appreciation is a secondary consideration.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. **The table and the example do not include any fees or sales charges imposed by variable insurance contracts, qualified retirement plans or investment companies.** If they were included, your costs would be higher.

SHAREHOLDER FEES (fees paid directly from your investment)

	Class 2
Maximum Sales Charge (Load) Imposed on Purchases	N/A

ANNUAL FUND OPERATING EXPENSES (expenses that you pay each year as a percentage of the value of your investment)

	Class 2
Management fees	0.47%
Distribution and service (12b-1) fees	0.25%
Other expenses	0.07%
Total annual Fund operating expenses	0.79%

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of the period. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class 2	\$81	\$252	\$439	\$978

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate

higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 21% of the average value of its portfolio.

Principal Investment Strategies

Under normal market conditions, the Fund invests at least 80% of its net assets in "bonds." Bonds include debt securities of any maturity, such as bonds, notes, bills and debentures. Under normal market conditions, the Fund expects to invest at least 40% of its net assets in foreign securities.

Although the Fund may buy bonds rated in any category, it focuses on "investment grade" bonds. These are issues rated in the top four rating categories by independent rating agencies such as Standard & Poor's (S&P®) or Moody's Investors Service (Moody's) or, if unrated, determined by the Fund's manager to be comparable. The Fund may invest up to 25% of its net assets in debt securities that are rated below investment grade. Generally, lower rated securities pay higher yields than more highly rated securities to compensate investors for the higher risk. The Fund may invest a significant to substantial portion of its assets in emerging markets. The Fund is a non-diversified fund, meaning that the Fund may invest a larger proportion of its assets in the securities of one or more issuers than a fund that is "diversified".

For purposes of pursuing its investment goals, the Fund regularly enters into currency-related transactions involving certain derivative instruments, including currency and cross currency forwards, options on currencies (as a purchaser of such options) and currency and currency index futures contracts. The use of derivative currency transactions may allow the Fund to obtain net long or net negative (short) exposure to selected currencies. The results of such transactions may also represent, from time to time, a significant component of the Fund's investment returns. The Fund may also enter into interest rate and credit related derivative transactions, including interest rate/bond futures contracts and options on such contracts and swap agreements (which may include interest rate and credit default swaps). The use of these derivative transactions may allow the Fund to obtain net long or net negative (short) exposures

to selected interest rates, countries, duration or credit risks.

The manager allocates the Fund's assets based upon its assessment of changing market, political and economic conditions. It will consider various factors, including evaluation of interest and currency exchange rate changes and credit risks.

Principal Risks

You could lose money by investing in the Fund. Mutual fund shares are not deposits or obligations of, or guaranteed or endorsed by, any bank, and are not insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other agency of the U.S. government.

Interest Rate When interest rates rise, debt security prices generally fall. The opposite is also true: debt security prices generally rise when interest rates fall. Securities with longer maturities are more sensitive to these interest rate changes.

Foreign Securities Investing in foreign securities, including depositary receipts, typically involves more risks than investing in U.S. securities, and include risks associated with: political and economic developments - the political, economic and social structures of some foreign countries may be less stable and more volatile than those in the U.S.; trading practices - government supervision and regulation of foreign security and currency markets, trading systems and brokers may be less than in the U.S.; availability of information - foreign issuers may not be subject to the same disclosure, accounting and financial reporting standards and practices as U.S. issuers; limited markets - securities of certain foreign issuers may be less liquid (harder to sell) and more volatile in price; and currency exchange rate fluctuations and policies. The risks of foreign investments typically are greater in less developed countries or emerging market countries.

Credit An issuer of debt securities may be unable to make interest payments and repay principal when due. Changes in an issuer's financial strength or in a security's credit rating may affect a security's value.

Lower-Rated Securities Companies issuing lower-rated or "high yield" debt securities are not as strong financially as those issuing securities with higher credit ratings. These companies are more likely to encounter financial difficulties and are more vulnerable to changes in the economy, such as a recession or a sustained period of rising interest rates, that could affect their ability to make interest and principal payments when due. The prices of high yield debt securities generally fluctuate more than those of higher credit quality.

Derivative Instruments The performance of derivative instruments depends largely on the performance of an underlying currency, security or index and often has risks similar to its underlying instrument, in addition to other risks. Derivative instruments involve costs, may be volatile and illiquid, may give rise to leverage and may involve a small initial investment relative to the risk assumed. There may also be imperfect correlation between the value of the derivative and the underlying instrument. When used for hedging, the change in value of the derivative may also not correlate specifically with the currency, security or other risk being hedged. With over-the-counter derivatives, there is the risk that the other party to the transaction will fail to perform.

Income Because the Fund can only distribute what it earns, the Fund's distributions to shareholders may decline when interest rates fall.

Non-Diversification Because the Fund is non-diversified, it may be more sensitive to economic, business, political or other changes affecting similar issuers or investments, which may result in greater fluctuation in the value of the Fund's shares.

Market The market price of securities owned by the Fund may go up or down, sometimes rapidly or unpredictably, as a result of market activity or the results of supply and demand.

Management The Fund is subject to management risk because it is an actively managed investment portfolio. The Fund's investment manager will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these decisions will produce the desired results.

Performance

The following bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows changes in the Fund's performance from year to year for Class 2 shares. The table shows how the Fund's average annual returns for 1 year, 5 years, 10 years or since inception, as applicable, compare with those of a broad measure of market performance. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

Performance reflects all Fund expenses but does not include any fees or sales charges imposed by variable insurance contracts or funds of funds. If they had been included, the returns shown below would be lower. Investors should consult the variable contract prospectus, or the disclosure documents of investment companies holding a significant number of shares for more information.

ANNUAL TOTAL RETURNS

Best Quarter: Q4'04 10.22%

Worst Quarter: Q2'08 -5.07%

As of March 31, 2010, the Fund's year-to-date return was 6.75% for Class 2.

AVERAGE ANNUAL TOTAL RETURNS

For the periods ended December 31, 2009

	1 Year	5 Years	10 Years
Templeton Global Bond Securities Fund - Class 2	18.68%	8.87%	10.73%
J.P. Morgan Government Bond Index - Global (index reflects no deduction for fees, expenses or taxes)	1.90%	4.60%	6.70%
Citigroup World Government Bond Index (WGBI) (index reflects no deduction for fees, expenses or taxes)	1.01%	4.79%	5.54%

J.P. Morgan Global Government Bond Index tracks total returns for liquid, fixed-rate, domestic government bonds with maturities greater than one year issued by developed countries globally. Citigroup World Government Bond Index is market capitalization weighted and tracks total returns of government bonds in 23 developed countries globally.

Investment Manager

Franklin Advisers, Inc. (Advisers)

Portfolio Managers

MICHAEL HASENSTAB PH.D.

Senior Vice President of Advisers and portfolio manager of the Fund since 2001.

Purchase and Sale of Fund Shares

Shares of the Fund are sold to insurance companies' separate accounts (Insurers) to fund variable annuity or variable life insurance contracts and to qualified funds of funds. Insurance companies offer variable annuity and variable life insurance products through separate accounts. Shares of the Fund may also be sold to other investment companies, either underlying funds in a fund of funds or other structures. In periods of market volatility, Fund assets may decline significantly, causing total annual fund operating expenses to become higher than the numbers shown in the fees and expenses table above. In addition, Fund shares are held by a limited number of Insurers and, when applicable, funds of funds. Substantial withdrawals by one or more Insurers, qualified retirement plans or funds of funds could reduce Fund assets, causing total Fund expenses to become higher than the numbers shown in the fees and expenses table above.

The terms of the offering of interests in separate accounts are included in the variable annuity or variable life insurance product prospectus. The terms of offerings of funds of funds and feeder funds are included in those funds' prospectuses. Investors

should consult the variable contract prospectus, disclosure document or fund of funds prospectus for more information on fees and expenses imposed by variable insurance contracts, qualified retirement plans or investment companies.

Taxes

Because shares of the Fund are generally purchased through variable annuity contracts or variable life insurance contracts, the Fund's distributions (which the Fund expects, based on its investment objectives and strategies to consist of ordinary income, capital gains or some combination of both) will be exempt from current taxation if left to accumulate within the variable contract. You should refer to your contract prospectus for more information on these tax consequences.

Payments to Sponsoring Insurance Companies and Other Financial Intermediaries

The Fund or its distributor (and related companies) may pay broker/dealers or other financial intermediaries (such as banks and insurance companies, or their related companies) for the sale and retention of variable contracts which offer Fund shares and/or for other services. These payments may create a conflict of interest for a financial intermediary, or be a factor in the insurance company's decision to include the Fund as an investment option in its variable contract. For more information, ask your financial advisor, visit your financial intermediary's website, or consult the Contract prospectus or this Fund prospectus.

Franklin Templeton Variable Insurance Products Trust

Overview

Franklin Templeton Variable Insurance Products Trust (the Trust) currently consists of multiple series (Funds), offering a wide variety of investment choices. Funds may be available in multiple classes: Class 1, Class 2, Class 3 and Class 4. The classes are identical except that Class 2, Class 3 and Class 4 each has a distribution plan and Class 3 may assess a redemption fee (see “Share Classes” under Fund Account Information). The Funds are available as investment options in variable annuity or variable life insurance contracts. Shares of the Funds may also be purchased by other mutual funds (Funds of Funds).

Investment Considerations

- Each Fund has its own investment strategy and risk profile. Generally, the higher the potential rate of return, the greater the risk of loss. Although stocks in the U.S. historically have outperformed other types of investments over the long term, they tend to go up and down more than other types of investments in the short term. Bonds and other fixed income securities historically have achieved returns less than those of stocks, and with lower risk, although the value of fixed income investments can go up and down over the short term. Money market and other very short-term investments historically have achieved the lowest returns, with the lowest risk.
- The following give a general sense of the level of fund assets associated with a particular investment or strategy: “small portion” (less than 10%); “portion” (10% to 25%); “significant” (25% to 50%); “substantial” (50% to 66%); “primary” (66% to 80%); and “predominant” (80% or more). The percentages are not limitations unless specifically stated as such in this prospectus or in the Trust’s Statement of Additional Information (SAI).

Risks

- The Funds, other than Franklin Templeton VIP Founding Funds Allocation Fund, are actively managed and could experience losses if the manager’s judgments about markets, interest rates or the attractiveness, relative values, liquidity, or potential appreciation of particular investments made for a Fund’s portfolio proved to be incorrect. There can be no guarantee that these techniques or the investment manager’s investment decisions will produce the desired results. Additionally, legislative, regulatory, or tax developments may affect the investment techniques available to the investment

manager in connection with managing a Fund and may also adversely affect the ability of the Fund to achieve its investment goal.

- The market value of securities owned by the Funds will go up or down, sometimes rapidly or unpredictably. Securities may decline in value due to general markets conditions which are not specifically related to a single corporate borrower or security issuer. Market values may also decline due to factors which affect a particular industry or sector, such as labor shortages or increased production costs and competitive conditions within an industry. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. When markets perform well, there can be no assurance that a Fund’s securities will participate in or otherwise benefit from the advance.
- Fund shares are not deposits or obligations of, or guaranteed or endorsed by, any bank, and are not federally insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other agency of the U.S. government. Fund shares involve investment risks, including the possible loss of principal.
- Because you could lose money by investing in a Fund, take the time to read each Fund description and consider all risks before investing.

Additional Information

More detailed information about each Fund, its investment policies, and its particular risks can be found in the SAI.

Investment Management

The Funds’ investment managers and their affiliates manage over \$586 billion in assets. In 1992,

Franklin joined forces with Templeton, a pioneer in international investing. The Mutual Series organization became part of the Franklin Templeton organization four years later. In 2001, the Fiduciary Trust team, known for providing global investment management to institutions and high net worth clients worldwide, joined the organization. Today, Franklin Templeton Investments is one of the largest mutual fund organizations in the United States, and offers money management expertise spanning a variety of investment goals.

Templeton Global Bond Securities Fund

Goals

The Fund's investment goal is high current income, consistent with preservation of capital. Capital appreciation is a secondary consideration.

Principal Investment Policies and Practices

Under normal market conditions, the Fund invests at least 80% of its net assets in bonds. Shareholders will be given at least 60 days' advance notice of any change to this policy. "Bonds" include debt securities of any maturity, such as bonds, notes, bills and debentures.

Bonds represent an obligation of the issuer to repay a loan of money to it, and generally provide for the payment of interest. Although the Fund may buy bonds rated in any category, it focuses on "investment grade" bonds. These are issues rated in the top four rating categories by independent rating agencies such as Standard & Poor's (S&P®) or Moody's Investors Service (Moody's) or, if unrated, determined by the Fund's manager to be comparable. The Fund may invest up to 25% of its total assets in bonds that are rated below investment grade. Generally, lower rated securities pay higher yields than more highly rated securities to compensate investors for the higher risk. The Fund may invest without limits in emerging markets.

For purposes of pursuing its investment goal, the Fund regularly enters into currency-related transactions involving certain derivative instruments, including currency and cross currency forwards, options on currencies (as a purchaser of such options), and currency and currency index futures contracts. The use of derivative currency transactions may allow the Fund to obtain net long or net negative (short) exposure to selected currencies. The results of such transactions may also represent, from time to time, a significant component of the Fund's investment returns. The Fund may also enter into various other transactions involving derivatives, including financial futures contracts (such as interest rate or bond futures) and options on such contracts, swap agreements (which may include interest rate swaps). The use of these derivative transactions may allow the Fund to obtain net long or net negative (short) exposures to selected interest rates, countries, duration or credit risks. The manager considers various factors, such as availability and cost, in deciding whether,

when and to what extent to enter into derivative transactions.

The Fund may use any of the above currency techniques or other derivative transactions for the purposes of enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in interest rates and other market factors. By way of example, when the manager believes that the value of a particular foreign currency is expected to increase compared to the U.S. dollar, the Fund could enter into a forward contract to purchase that foreign currency at a future date. If at such future date the value of the foreign currency exceeds the then current amount of U.S. dollars to be paid by the Fund under the contract, the Fund will recognize a gain. When used for hedging purposes, a forward contract or other derivative instrument could be used to protect against possible declines in a currency's value where a security held or to be purchased by the Fund is denominated in that currency, or it may be used to hedge the Fund's position by entering into a transaction on another currency expected to perform similarly to the currency of the security held or to be purchased (a "proxy hedge").

A forward contract is an obligation to purchase or sell a specific foreign currency at an agreed exchange rate (price) at a future date, which is individually negotiated and privately traded by currency traders and their customers in the interbank market. A cross currency forward, sometimes referred to as a "cross-hedge," is a forward contract to sell a specific foreign currency in exchange for another foreign currency and may be used when the Fund believes that the price of one of those foreign currencies will experience a substantial movement against the other foreign currency. A cross-hedge will tend to reduce or eliminate exposure to the currency that is sold, and increase exposure to the currency that is purchased, similar to when the Fund sells a security denominated in one currency and purchases a security denominated in another currency. A cross-hedge will protect the Fund against losses resulting from a decline in the hedged currency, but will cause the Fund to assume the risk of fluctuations in the value of the currency it purchases.

A futures contract is a standard binding agreement between two parties to buy or sell a specified quantity of an underlying instrument or asset, such as a specific security or currency, at a specified price at a specified later date that trade on an exchange. A “sale” of a futures contract means the acquisition of a contractual obligation to deliver the underlying instrument called for by the contract at a specified price on a specified date. A “purchase” of a futures contract means the acquisition of a contractual obligation to acquire the underlying instrument called for by the contract at a specified price on a specified date. The purchase or sale of a futures contract will allow the Fund to increase or decrease its exposure to the underlying instrument. Although most futures contracts by their terms require the actual delivery or acquisition of the underlying instrument, some require cash settlement. The Fund may buy and sell futures contracts that trade on U.S. and foreign exchanges.

Swap agreements, such as interest rate and credit default swaps, are contracts between the Fund and, typically, a brokerage firm, bank, or other financial institution (the swap counterparty) for periods ranging from a few days to multiple years. In a basic swap transaction, the Fund agrees with its counterparty to exchange the returns (or differentials in rates of return) earned or realized on a particular “notional amount” of underlying instruments. The notional amount is the set amount selected by the parties as the basis on which to calculate the obligations that they have agreed to exchange. The parties typically do not actually exchange the notional amount. Instead, they agree to exchange the returns that would be earned or realized if the notional amount were invested in given instruments or at given interest rates. For credit default swaps, the “buyer” of the credit default swap agreement is obligated to pay the “seller” a periodic stream of payments over the term of the agreement in return for a payment by the “seller” that is contingent upon the occurrence of a credit event with respect to an underlying reference debt obligation. As a “buyer” of the credit default swap, the Fund is purchasing the obligation of its counterparty to offset losses the Fund could experience if there was such a credit event. Generally, a credit event means bankruptcy, failure to timely pay interest or principal, obligation acceleration, or modified restructuring of the reference debt obligation. The contingent payment by the seller

generally is the face amount of the debt obligation in exchange for the physical delivery of the reference debt obligation or a cash payment equal to the then current market value of that debt obligation. An interest rate swap is an agreement between two parties to exchange interest rate obligations, generally one based on an interest rate fixed to maturity while the other is based on an interest rate that changes in accordance with changes in a designated benchmark (for example, LIBOR, prime, commercial paper, or other benchmarks).

The Fund may also, from time to time, enter into various other derivative strategies, including financial and index futures contracts and options on such contracts, as well as interest rate swaps. A financial futures contract is an agreement to buy or sell a specific security or securities at a specified future date and price. Among other techniques, the Fund may also use futures contracts on U.S. Treasury securities to help manage risks relating to interest rates and other market factors, to increase liquidity, to invest in particular instruments in more efficient or less expensive ways, and to quickly and efficiently cause new cash to be invested in the securities markets or, if cash will be needed to meet shareholder redemption requests, to remove Fund assets from exposure to the market. In addition, the Fund may invest in swap agreements which may include interest rate, index, total return, currency and credit default swaps for the purposes of attempting to obtain a particular desired return at a lower cost to the Fund than if the Fund had invested directly in an instrument that yielded that desired return. Swap agreements are contracts between the Fund and, typically, a brokerage firm, bank or other institutional buyer for periods ranging from a few days to more than a year, in which the two parties agree to exchange the returns (or differentials in rates of return) earned or realized on a particular set dollar or other currency value of predetermined investments or instruments. The gross returns to be exchanged or “swapped” between the parties are calculated with respect to a “notional amount”, i.e., the return on or increase in value of a particular U.S. dollar amount invested at a particular interest rate, in a particular foreign currency, or in a “basket” of securities representing a particular index. The “notional amount” of the swap agreement is only a fictive basis on which to calculate the obligations which the parties

to a swap agreement have agreed to exchange. The Fund's obligations (or rights) under a swap agreement will generally be equal only to the net amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the "net amount").

With derivatives, the manager attempts to predict whether an underlying investment will increase or decrease in value at some future time. The manager considers various factors, such as availability and cost, in deciding whether to use a particular instrument or strategy. These techniques could result in a loss if the counterparty to the transaction does not perform as promised. Moreover, investors should bear in mind that the Fund is not obligated to actively engage in any derivative transactions.

Portfolio Selection

The manager allocates the Fund's assets based upon its assessment of changing market, political and economic conditions. It will consider various factors,

The Fund invests mainly in debt securities of governments, government agencies and companies located around the world, including a significant amount in emerging markets.

including evaluation of interest and currency exchange rate changes and credit risks.

Commodity Exchange Act Exclusion

The Fund has claimed an exclusion from the definition of the term "commodity pool operator" under the Commodity Exchange Act (CEA), and, therefore, is not subject to registration or regulation as a commodity pool operator under the CEA.

Temporary Investments

When the manager believes market or economic conditions are unfavorable for investors, the manager may invest up to 100% of the Fund's assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents or other high quality short-term investments. Temporary defensive investments generally may include short-term U.S. government securities, commercial paper, short-term bank time deposits, bankers' acceptances and money market fund shares. The manager also may invest in these types of securities or hold cash while looking for suitable investment opportunities, to maintain liquidity or to segregate on the Fund's books in connection with its forward currency, currency or interest rate futures positions. In these circumstances, the Fund may be unable to achieve its investment goal.

Principal Risks

The Fund's principal risks may affect the Fund's share price, its distributions or income and, therefore, the Fund's performance.

Interest Rate

Interest rate changes can be sudden and unpredictable. Debt securities tend to lose market value when interest rates rise and increase in value when interest rates fall. In general, securities with longer maturities or lower coupons are more sensitive to these rate changes. Increases in interest rates also may have an adverse effect on the issuers in which the Fund normally invests because they may find it difficult to make interest payments. A sub-category of interest rate risk is **reinvestment risk**, which is the risk that interest rates will be lower when the Fund seeks to reinvest interest payments, the proceeds from a matured debt security or a debt security that has been pre-paid (called), resulting in less income received by the Fund.

Foreign Securities

Investing in foreign securities, including securities of foreign governments, typically involves more risks than investing in U.S. securities. Certain of these risks also may apply to securities of U.S. companies with significant foreign operations. These risks can increase the potential for losses in the Fund and affect its share price.

Currency exchange rates. Foreign securities may be issued and traded in foreign currencies. As a result, their values may be affected by changes in exchange rates between foreign currencies and the U.S. dollar, as well as between currencies of countries other than the U.S. For example, if the value of the U.S. dollar goes up compared to a foreign currency, an investment traded in that foreign currency will go down in value because it will be worth fewer U.S. dollars.

To the extent the Fund does not hedge, or unsuccessfully hedges, its currency exposure, these currency exchange rate changes can have a disproportionate impact on the Fund's performance,

Changes in interest rates affect the prices of the Fund's debt securities. If rates rise, the value of all the Fund's debt securities will fall and so too will the Fund's share price. This means you could lose money.

even accounting for most of the gain or loss in a particular period.

Currency management strategies. Currency management strategies, including cross-hedging, may substantially change the Fund's exposure to currency exchange rates and could result in losses to the Fund if currencies do not perform as the manager expects. In addition, currency management strategies, to the extent that they reduce the Fund's exposure to currency risks, may also reduce the Fund's ability to benefit from favorable changes in currency exchange rates. There is no assurance that the manager's use of currency management strategies will benefit the Fund or that they will be, or can be, used at appropriate times. Furthermore, there may not be perfect correlation between the amount of exposure to a particular currency and the amount of securities in the portfolio denominated in that currency.

Political and economic developments. The political, economic and social structures of some foreign countries may be less stable and more volatile than those in the U.S. Investments in these countries may be subject to the risks of internal and external conflicts, currency devaluations, foreign ownership limitations and tax increases. It is possible that a government may take over the assets or operations of a company or impose restrictions on the exchange or export of currency or other assets. Some countries also may have different legal systems that may make it difficult for the Fund to vote proxies, exercise shareholder rights, and pursue legal remedies with respect to its foreign investments. Diplomatic and political developments, including rapid and adverse political changes, social instability, regional conflicts, terrorism and war, could affect the economies, industries and securities and currency markets, and the value of the Fund's investments, in non-U.S. countries. These factors are extremely difficult, if not impossible, to predict and take into account with respect to the Fund's investments.

Trading practices. Brokerage commissions and other fees generally are higher for foreign securities. Government supervision and regulation of foreign securities markets, currency markets, trading systems and brokers may be less than in the U.S. The procedures and rules governing foreign transactions and custody (holding of the Fund's assets) also may

involve delays in payment, delivery or recovery of money or investments.

Availability of information. Foreign companies may not be subject to the same disclosure, accounting, auditing and financial reporting standards and practices as U.S. companies. Thus, there may be less information publicly available about foreign companies than about most U.S. companies.

Limited markets. Certain foreign securities may be less liquid (harder to sell) and their prices may be more volatile than many U.S. securities. This means the Fund may at times be unable to sell foreign securities at favorable prices.

Emerging markets. The risks of foreign investments typically are greater in less developed countries, sometimes referred to as developing or emerging markets. For example, political and economic structures in these countries may be less established and may change rapidly. These countries also are more likely to experience high levels of inflation, deflation or currency devaluation, which can harm their economies and securities markets and increase volatility. In fact, short-term volatility in these markets and declines of 50% or more are not uncommon. Restrictions on currency trading that may be imposed by emerging market countries will have an adverse effect on the value of the securities of companies that trade or operate in such countries.

Credit

An issuer of bonds may be unable to make interest payments and repay principal when due. Changes in an issuer's financial strength or in a security's credit rating may affect a security's value and, thus, impact Fund performance.

Lower-rated securities. Securities rated below investment grade, sometimes called "junk bonds," generally have more credit risk than higher-rated securities.

Issuers issuing high yield, fixed-income securities are not as strong financially as those issuing securities with higher credit ratings. These issuers are more likely to encounter financial difficulties and are more vulnerable to changes in the economy, such as a recession or a sustained period of rising interest rates that could affect their ability to make interest and

principal payments. If an issuer stops making interest and/or principal payments, payments on the securities may never resume. These securities may be worthless and the Fund could lose its entire investment.

The prices of high yield, fixed-income securities fluctuate more than higher-quality securities. Prices are especially sensitive to developments affecting the company's business and to changes in the ratings assigned by rating agencies. Prices of corporate high yield securities often are closely linked with the company's stock prices and typically rise and fall in response to factors that affect stock prices. In addition, the entire high yield securities market can experience sudden and sharp price swings due to changes in economic conditions, stock market activity, large sustained sales by major investors, a high-profile default, or other factors.

High yield securities generally are less liquid than higher-quality securities. Many of these securities do not trade frequently, and when they do their prices may be significantly higher or lower than expected. At times, it may be difficult to sell these securities promptly at an acceptable price, which may limit the Fund's ability to sell securities in response to specific economic events or to meet redemption requests.

Substantial declines in the prices of high yield debt securities can dramatically increase the yield of such bonds. The decline in market prices generally reflects an expectation that the issuer(s) may be at greater risk of defaulting on the obligation to pay interest and principal when due. Therefore, substantial increases in yield may reflect a greater risk by the Fund of losing some or part of its investment rather than any increase in income that the debt security or securities may pay to the Fund on its investment.

Derivative Instruments

The performance of derivative instruments depends largely on the performance of an underlying instrument or index. Derivative instruments involve costs, may be volatile, and may involve a small initial investment relative to the risk assumed. Their successful use will usually depend on the manager's ability to accurately forecast movements in the market relating to the underlying instrument. Should a market or markets, or prices of particular classes of investments move in an unexpected manner,

especially in unusual or extreme market conditions, the Fund may not achieve the anticipated benefits of the transaction, and it may realize losses, which could be significant. If the manager is not successful in using such derivative instruments, the Fund's performance may be worse than if the manager did not use such derivative instruments at all. To the extent that the Fund uses such instruments for hedging purposes, there is the risk of imperfect correlation between movements in the value of the derivative instrument and the value of underlying investment or other asset being hedged. There is also the risk, especially under extreme market conditions, that an instrument, which usually would operate as a hedge, provides no hedging benefits at all.

Use of these instruments could also result in a loss if the counterparty to the transaction (with respect to OTC instruments, swap agreements and forward currency contracts) does not perform as promised, including because of such counterparty's bankruptcy or insolvency. This risk may be heightened during volatile market conditions. Other risks include the inability to close out a position because the trading market becomes illiquid (particularly in the OTC markets) or the availability of counterparties becomes limited for a period of time. In addition, the presence of speculators in a particular market could lead to price distortions. To the extent that the Fund is unable to close out a position because of market illiquidity, the Fund may not be able to prevent further losses of value in its derivatives holdings and the Fund's liquidity may be impaired to the extent that it has a substantial portion of its otherwise liquid assets marked as segregated to cover its obligations under such derivative instruments. The Fund may also be required to take or make delivery of an underlying

instrument that the manager would otherwise have attempted to avoid. Some derivatives can be particularly sensitive to changes in interest rates or other market prices. Investors should bear in mind that, while the Fund intends to use derivative strategies on a regular basis, it is not obligated to actively engage in these transactions, generally or in any particular kind of derivative, if the manager elects not to do so due to availability, cost or other factors.

The use of derivative strategies may also have a tax impact on the Fund. The timing and character of income, gains or losses from these strategies could impair the ability of the manager to utilize derivatives when it wishes to do so.

Non-Diversification

The Fund is a non-diversified fund. It may invest a greater portion of its assets in the securities of any one issuer and invest in a smaller number of issuers overall than a diversified fund. The Fund may be more sensitive to economic, business, political or other changes affecting similar issuers or securities, which may result in greater fluctuation in the value of the Fund's shares. The Fund intends, however, to meet certain tax diversification requirements.

Portfolio Turnover

The manager may rebalance the Fund's portfolio from time to time to keep interest rate risk, country allocations, and bond maturities at desired levels, which may cause the Fund's portfolio turnover rate to be high. High turnover will increase the Fund's transaction costs.

More detailed information about the Fund, its policies and risks can be found in the Fund's SAI.

Management

Franklin Advisers, Inc. (Advisers), One Franklin Parkway, San Mateo, California 94403-1906, is the Fund's investment manager.

The Fund is managed by the following dedicated professional focused on investments of debt securities in any country, including emerging markets:

MICHAEL HASENSTAB PH.D. Dr. Hasenstab has been the portfolio manager of the Fund since 2002 and an analyst since 2001. He has primary responsibility for the investments of the Fund. Dr. Hasenstab has final authority over all aspects of the Fund's investment portfolio, including but not limited to, purchases and sales of individual securities, portfolio risk assessment, and the management of daily cash balances in accordance with anticipated investment management requirements. The degree to which he may perform these functions, and the nature of these functions, may change from time to time. He first joined Franklin Templeton Investments in 1995, rejoining again in 2001 after a three-year leave to obtain his Ph.D.

The Fund's SAI provides additional information about portfolio manager compensation, other accounts that they manage and their ownership of Fund shares.

The Fund pays Advisers a fee for managing the Fund's assets and providing certain administrative facilities and services for the Fund. For the fiscal year ended December 31, 2009 the Fund paid 0.47% of its average daily net assets to Advisers for its services.

A discussion regarding the basis for the board of trustees approving the investment management contract of the Fund is available in the Fund's semiannual report to shareholders for the six-month period ended June 30.

Financial Highlights

This table presents the financial performance of Class 2 shares for the past five years or since inception. The table shows certain information on a single Fund share basis (per share performance). It also shows some key Fund statistics, such as total return (past performance) and expense ratios. Total return represents the annual change in value of a share assuming reinvestment of dividends and capital gains. This information has been audited by PricewaterhouseCoopers LLP. Their report, along with the Fund's financial statements, is included in the annual report, which is available upon request.

Class 2	Year Ended December 31,				
	2009	2008	2007	2006	2005
Per share operating performance (for a share outstanding throughout the year)					
Net asset value, beginning of year	\$17.10	\$16.72	\$15.50	\$14.19	\$15.64
Income from investment operations: ^a					
Net investment income ^b	0.93	0.74	0.72	0.57	0.52
Net realized and unrealized gains (losses)	1.98	0.27	0.96	1.21	(1.00)
Total from investment operations	2.91	1.01	1.68	1.78	(0.48)
Less distributions from net investment income and net foreign currency gains					
	(2.67)	(0.63)	(0.46)	(0.47)	(0.97)
Redemption fees ^c	—	—	—	—	—
Net asset value, end of year	\$17.34	\$17.10	\$16.72	\$15.50	\$14.19
Total return ^d	18.68%	6.21%	11.00%	12.77%	(3.08%)
Ratios to average net assets					
Expenses before expense reduction	0.79%	0.83%	0.89%	1.05%	1.03%
Expenses net of expense reduction	0.79% ^e	0.83% ^e	0.89% ^e	0.97%	0.99%
Net investment income	5.48%	4.41%	4.45%	3.84%	3.56%
Supplemental data					
Net assets, end of year (000's)	\$1,262,783	\$793,881	\$480,649	\$205,768	\$61,255
Portfolio turnover rate	20.84%	28.46%	47.33%	30.65%	30.28%

a. The amount shown for a share outstanding throughout the period may not correlate with the Statement of Operations in the annual report for the period due to the timing of sales and repurchases of the Fund shares in relation to income earned and/or fluctuating market value of the investments of the Fund.

b. Based on average daily shares outstanding.

c. Amount rounds to less than \$0.01 per share.

d. Total return does not include any fees, charges or expenses imposed by the variable annuity and life insurance contracts for which the Franklin Templeton Variable Insurance Products Trust serves as an underlying investment vehicle.

e. Benefit of expense reduction rounds to less than 0.01%.

Additional Information, All Funds

Regulatory Update

In 2003 and 2004, multiple lawsuits were filed against Franklin Resources, Inc., and certain of its investment advisor subsidiaries, among other defendants, alleging violations of federal securities and state laws and seeking, among other relief, monetary damages, restitution, removal of fund trustees, directors, investment managers, administrators and distributors, rescission of management contracts and 12b-1 plans, and/or attorneys' fees and costs. Specifically, the lawsuits claim breach of duty with respect to alleged arrangements to permit market timing and/or late trading activity, or breach of duty with respect to the valuation of the portfolio securities of certain Templeton funds managed by Franklin Resources, Inc. subsidiaries, allegedly resulting in market timing activity. The lawsuits are styled as class actions, or derivative actions on behalf of either the named funds or Franklin Resources, Inc., and have been consolidated for pretrial purposes, along with hundreds of other similar lawsuits against other mutual fund companies. All of the Franklin Templeton Investments mutual funds that were named in the litigation as defendants have since been dismissed, as have the independent trustees to those funds.

Franklin Resources, Inc. previously disclosed these private lawsuits in its regulatory filings and on its public website. Any material updates regarding these matters will be disclosed in Franklin Resources, Inc.'s Form 10-Q or Form 10-K filings with the U.S. Securities and Exchange Commission.

DEALER COMPENSATION

Franklin Templeton Distributors, Inc. (Distributors) and/or its affiliates may provide financial support to securities dealers that sell shares of Franklin Templeton funds, or participate in the offering of variable insurance products that invest in the Trust (VIP Qualifying Dealers); such financial support may be made by payments from Distributors' and/or its affiliates' resources, including from Distributors' retention of underwriting concessions and, in the case of Rule 12b-1 share classes, from payments to Distributors under such plans.

Distributors makes these payments in connection with VIP Qualifying Dealers' efforts to educate financial advisors about our funds. A number of factors will be considered in determining payments, including such dealer's sales, assets and redemption rates, and the

quality of the dealer's relationship with Distributors. Distributors will, on an annual basis, determine the advisability of continuing these payments. To the extent permitted by SEC and FINRA rules and other applicable laws and regulations, Distributors and/or its affiliates may pay or allow other promotional incentives or payments to dealers. Sale of shares of the Funds, as well as shares of other Franklin Templeton funds, is not considered a factor in the selection of securities dealers to execute the Funds' portfolio transactions. Accordingly, the allocation of portfolio transactions for execution by VIP Qualifying Dealers is not considered marketing support payments.

You can find further details in the SAI about the payments made by Distributors and/or its affiliates and the services provided by your VIP Qualifying Dealer. While your insurance company's fees and charges are generally disclosed in the insurance contract prospectus, your VIP Qualifying Dealer may charge you additional fees or commissions other than those disclosed in this prospectus. You can ask your insurance company and VIP Qualifying Dealer for information about any payments they receive from Distributors and/or its affiliates and any services they provide, as well as about fees and/or commissions they charge. These payments and other fees and charges are not reflected in the fee table included in this prospectus. Additional disclosure may be included in the insurance contract prospectus.

PORTFOLIO HOLDINGS

A description of the Trust's policies and procedures regarding the release of portfolio holdings information for each Fund of the Trust (collectively the Fund) is also available in the Trust's SAI. Portfolio holdings information can be viewed online at franklintempleton.com.

STATEMENTS AND REPORTS

Contract Owners should receive financial reports for the Fund related to their Contract from the sponsoring Insurer every six months.

ADMINISTRATIVE SERVICES

Franklin Templeton Services, LLC provides business administration services and facilities for the Fund and makes certain payments (see the SAI for more information) to insurance companies out of its own resources for certain administrative services.

Distributions and Taxes

INCOME AND CAPITAL GAINS DISTRIBUTIONS

Each Fund (sometimes referred to as, “the Fund”) intends to pay income dividends at least annually from its net investment income. Capital gains, if any, may be paid at least annually. The amount of any distribution will vary, and there is no guarantee the Fund will pay either income dividends or capital gain distributions. Please refer to the Fund’s prospectus for additional information about the Fund’s distributions.

TAX CONSIDERATIONS

The Trust consists of multiple Funds each of which for federal income tax purposes is treated separately from any other. Each Fund expects to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”). Accordingly, the assets, income and distributions of the Fund are considered separately for purposes of determining whether the Fund qualifies as a regulated investment company. If the Fund so qualifies, it will not be subject to federal income tax on the portion of its income and gains that it distributes to shareholders. Additionally, each Fund intends to comply with the diversification requirements imposed by Section 817(h) of the Code.

For federal income tax purposes, the insurance companies and their separate accounts are treated as the owners of the shares of the Fund selected as an investment option rather than the purchasers of

a variable annuity contract or variable life insurance policy (variable contracts). In light of the tax-favored status of life insurance company separate accounts, there should be no adverse federal income tax consequences to them as a result of their buying, holding, exchanging or selling Fund shares or on their receipt of Fund distributions, subject to applicable limitations under the Code.

Shares of the Fund must be purchased by investors through variable contracts issued by life insurance companies. As a result, it is anticipated that any income dividends or capital gains distributions paid by the Fund will be exempt from current taxation to the purchaser of such variable contracts if left to accumulate within a variable contract. Withdrawals from such contracts may be subject to ordinary income tax plus a 10% penalty tax if made before age 59½. For more information on taxes, please refer to the accompanying prospectus of the annuity or life insurance program through which shares of the Fund are offered.

Other tax information. This discussion of “Distributions and Taxes” is for general information only and is not tax advice. You should consult your own tax advisor regarding your particular circumstances and about any federal, state or local tax consequences before making an investment in a variable contract or the Fund.

Fund Account Information

Buying Shares

Insurance companies offer variable annuity and variable life insurance products to investors including pension plans (Contracts), through separate accounts (Insurers). When shares of the Fund are investment options of Contracts, separate accounts, and not the owners of the Contracts including group contract and pension plan certificate holders (Contract Owners), are generally the shareholders of the Fund. Shares of the Fund may also be purchased by other mutual funds (Funds of Funds).

Shares of the Fund are sold at net asset value (NAV). When sold in connection with Contracts, the Fund correspond with the investment options offered by the Insurer to Contract Owners. The board of trustees monitors the Fund for the existence of any material irreconcilable conflicts of interest between different types of their separate account investors. If there were

any such conflicts, the board of trustees will determine what action, if any, shall be taken in response. Please refer to the accompanying contract prospectus for information on how to select the Fund as an investment option.

Contract Owners' payments will be allocated by the insurance company separate account to sub-accounts that purchase shares of the Fund corresponding with the sub-account chosen by the Contract Owner, and are subject to any limits or conditions in the contract. Requests to buy shares are processed at the NAV next calculated after we or our designees receive the request in proper form. Please refer to your Contract prospectus or other disclosure document for further information. The Fund does not issue share certificates.

Selling Shares

An Insurer that holds shares of the Fund in connection with a Contract sells shares of the Fund to make benefit or surrender payments or to execute exchanges

(transfers) between investment options under the terms of the Contract.

Exchanging Shares

Contract Owners may exchange interests in sub-accounts of an insurance company separate account that corresponds with shares of any one class or Fund, for interests in sub-accounts that correspond with shares of other classes or Fund, subject to the terms and any specific limitations on the exchange (or "transfer") privilege described in the Contract prospectus.

Frequent exchanges or excessive trading can harm performance and interfere with Fund portfolio management or operations and increase Fund costs. The Funds discourage short-term or excessive trading and may seek to restrict or reject such trading (please see "Market Timing Trading Policy," below).

Market Timing Trading Policy

The board of trustees has adopted the following policies and procedures with respect to market timing (Market Timing Trading Policy):

Market timing generally. The Fund discourages and does not intend to accommodate short-term or frequent purchases and redemptions of fund shares, often referred to as “market timing,” and asks its Fund of Fund investors and participating Insurers for their cooperation in trying to discourage such activity in their separate accounts by Contract Owners and their financial advisors. The Fund intends to seek to restrict or reject such trading or take other action, as described below, if in the judgment of the Fund manager or transfer agent such trading may interfere with the efficient management of the Fund’s portfolio, may materially increase the Fund’s transaction costs, administrative costs or taxes, or may otherwise be detrimental to the interests of the Fund and its shareholders.

Market timing consequences. If information regarding trading activity in the Fund or in any other Franklin Templeton fund or non-Franklin Templeton fund is brought to the attention of the Fund’s manager or transfer agent and based on that information the Fund or its manager or transfer agent in their sole discretion conclude that such trading may be detrimental to the Fund as described in this Market Timing Trading Policy, the Fund may temporarily or permanently bar future purchases into the Fund or, alternatively, may limit the amount, number or frequency of any future purchases and/or the method by which an Insurer or a Fund of Funds may request future purchases and redemptions (including purchases and/or redemptions by an exchange or transfer between the Fund and any other mutual fund).

In considering trading activity, the Fund may consider, among other factors, trading history both directly and, if known, through financial intermediaries, in the Fund, in other Franklin Templeton funds, in non-Franklin Templeton mutual funds, or in accounts under common control or ownership.

Market timing through Insurers. *As a Contract Owner you are also subject to this policy.* An Insurer’s order for purchases and/or redemptions pursuant to a Contract Owner’s instructions (including purchases and/or redemptions by an exchange or transfer between the Fund and any mutual fund) are submitted pursuant to aggregated orders (Aggregated Orders). A Fund of Fund’s order for purchases and/or redemptions pursuant to its investors’ instructions are also submitted pursuant to Aggregated Orders. While the Fund will encourage Insurers and Funds of Funds to apply the Fund’s Market Timing Trading Policy to their investors, the Fund is limited in its ability to monitor the trading activity or enforce the Fund’s Market Timing Trading Policy because Insurers and Funds of Funds have the relationships with, and are responsible for maintaining the account records of, the individual investors. For example, should it occur, the Fund may not be able to detect market timing that may be facilitated by financial intermediaries or made difficult to identify in the Aggregated Orders used by Insurers and Fund of Fund investors.

Therefore, the Fund or its agent selectively monitor the Aggregated Orders used by Insurers and Fund of Fund investors for purchases, exchanges and redemptions in respect of all their investors and seek the cooperation of Insurers and Fund of Fund investors to apply the Fund’s Market Timing Trading Policy. There may be legal and technological limitations on the ability of an Insurer or Fund of Fund to impose trading restrictions and to apply the Fund’s Market Timing Trading Policy to their investors through such methods as implementing short-term trading limitations or restrictions, assessing the Fund’s redemption fee (if applicable) and monitoring trading activity for what might be market timing. As a result, the Fund may not be able to determine whether trading by Insurers or Funds of Funds in respect of their investors is contrary to the Fund’s Market Timing Trading Policy.

Risks from market timers. Depending on various factors, including the size of the Fund, the amount of assets the portfolio manager typically maintains in cash or cash equivalents and the dollar amount

and number and frequency of trades and the types of securities in which the Fund typically invests, short-term or frequent trading may interfere with the efficient management of the Fund's portfolio, increase the Fund's transaction costs, administrative costs and taxes and/or impact Fund performance.

In addition, if the nature of the Fund's portfolio holdings exposes the Fund to "arbitrage market timers," the value of the Fund's shares may be diluted if redeeming shareholders receive proceeds (and buying shareholders receive shares) based upon net asset values which do not reflect appropriate fair value prices. Arbitrage market timing occurs when an investor seeks to take advantage of the possible delay between the change in the value of a mutual fund's portfolio holdings and the reflection of the change in the fund's net asset value per share. A fund that invests significantly in foreign securities may be particularly vulnerable to arbitrage market timing. Arbitrage market timing in foreign investments may occur because of time zone differences between the foreign markets on which the Fund's international portfolio securities trade and the time as of which the Fund's NAV is calculated. Arbitrage market timers may purchase shares of the Fund based on events occurring after foreign market closing prices are established, but before calculation of the Fund's NAV. One of the objectives of the Trust's fair value pricing procedures is to minimize the possibilities of this type of arbitrage market timing (please see "Valuation - Foreign Securities – Potential Impact of Time Zones and Market Holidays").

Since the Fund may invest significantly in securities that are, or may be, restricted, unlisted, traded infrequently, thinly traded, or relatively illiquid (relatively illiquid securities), the Fund may be particularly vulnerable to arbitrage market timing. An arbitrage market timer may seek to take advantage of a possible differential between the last available market prices for one or more of these relatively illiquid securities that are used to calculate the Fund's net asset value and the latest indications of market values for those securities. One of the objectives of

the Fund's fair value pricing procedures is to minimize the possibilities of this type of arbitrage market timing (please see "Fair Valuation – Individual Securities" under the heading "Fund Account Policies", below).

The Fund is currently using several methods to reduce the risk of market timing. These methods include:

- seeking the cooperation of Insurers and Funds of Funds to assist the Fund in identifying potential market timing activity;
- committing staff to selectively review on a continuing basis recent trading activity in order to identify trading activity that may be contrary to the Fund's Market Timing Trading Policy;
- monitoring potential price differentials following the close of trading in foreign markets to determine whether the application of fair value pricing procedures is warranted; and
- seeking the cooperation of financial intermediaries to assist the Fund in identifying market timing activity.

Though these methods involve judgments that are inherently subjective and involve some selectivity in their application, the Fund seeks to make judgments and applications that are consistent with the interests of the Fund's shareholders. There is no assurance that the Fund or its agents will gain access to any or all information necessary to detect market timing in Insurers' separate accounts. While the Fund will seek to take actions (directly and with the assistance of Insurers) that will detect market timing, it cannot represent that such trading activity can be minimized or completely eliminated.

Revocation of market timing trades. Transactions placed in violation of a Fund's Market Timing Trading Policy or exchange limit guidelines are not necessarily deemed accepted by the Fund and may be cancelled or revoked by the Fund, in full or in part, as soon as practicable following receipt by the Fund and prompt inquiry of the intermediary.

Involuntary Redemptions

The Fund reserves the right to close an account (and involuntarily redeem any investment) if it is deemed to have engaged in activities that are illegal (such as late trading) or otherwise believed to be detrimental to the Fund (such as market timing), to the fullest extent permitted by law and consistent with the best interests of the Fund and its shareholders. Thus, for

example, if upon inquiry the Fund and insurance company identify a contract owner that has engaged in late trading or market timing activities, the Fund may advise the insurance company that it will not accept future investments, or is redeeming any investment related to that contract owner. Involuntary redemptions may be in cash or in kind.

Fund Account Policies

CALCULATING SHARE PRICE

When they buy and sell shares, the Fund's shareholders pay and receive the net asset value (NAV) per share.

The value of a mutual fund is determined by deducting the fund's liabilities from the total assets of the portfolio. The NAV per share of a class of the Fund is determined by dividing the net asset value of the Fund's share class by the applicable number of shares outstanding of that share class. The Fund's NAV does not include any fee or sales charge imposed by variable insurance contracts for which the Fund is an investment option or Funds of Funds that purchase shares of the Fund. Investors should consult the contract prospectus, disclosure document or Fund of Funds prospectus for more information.

The Fund calculates the NAV per share each business day at the close of trading on the New York Stock Exchange (NYSE) (normally 1:00 p.m. Pacific time). The Fund does not calculate NAV on days the NYSE is closed for trading, which include New Year's Day, Martin Luther King Jr. Day, President's Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The Franklin Templeton VIP Founding Fund Allocation Fund calculates its NAV using the NAV calculations of the funds in which it invests.

When determining the NAV, the Fund values cash and receivables at their realizable amounts, and records interest as accrued and dividends on the ex-dividend date. The Fund generally utilizes two independent

pricing services to assist in determining a current market value for each security. If market quotations are readily available for portfolio securities listed on a securities exchange, the Fund values those securities at the last quoted sale price or the official closing price of the day, respectively, or, if there is no reported sale, within the range of the most recent quoted bid and ask prices. The Fund values over-the-counter portfolio securities within the range of the most recent bid and ask prices. If portfolio securities trade both in the over-the-counter market and on a stock exchange, the Fund values them according to the broadest and most representative market.

Generally, trading in corporate bonds, U.S. government securities and money market instruments is substantially completed each day at various times before the close of the NYSE. The value of these securities used in computing the NAV is determined as of such times. Occasionally, events affecting the values of these securities may occur between the times at which they are determined and the close of the NYSE that will not be reflected in the computation of the NAV. The Fund relies on third party pricing vendors to monitor for events materially affecting the value of these securities during this period. If an event occurs, the third party pricing vendors will provide revised values to the Fund.

FAIR VALUATION - INDIVIDUAL SECURITIES

Since the Fund may invest in securities that are restricted, unlisted, traded infrequently, thinly traded, or relatively illiquid, there is the possibility of a

differential between the last available market prices for one or more of those securities and the latest indications of market values for those securities. The Fund has procedures, approved by the board of trustees, to determine the fair value of individual securities and other assets for which market prices are not readily available (such as certain restricted or unlisted securities and private placements) or which may not be reliably priced (such as in the case of trade suspensions or halts, price movement limits set by certain foreign markets, and thinly traded or illiquid securities). Some methods for valuing these securities may include: fundamental analysis (earnings multiple, etc.), matrix pricing, discounts from market prices of similar securities, or discounts applied due to the nature and duration of restrictions on the disposition of the securities. The board of trustees oversees the application of fair value pricing procedures.

The application of fair value pricing procedures represents a good faith determination based upon specifically applied procedures. There can be no assurance that the Funds could obtain the fair value assigned to a security if they were able to sell the security at approximately the time at which a Fund determines its NAV per share.

SECURITY VALUATION - U.S. PASS-THROUGH SECURITIES, CMO, ABS, MBS

Mortgage pass-through securities (such as Ginnie Mae, Fannie Mae and Freddie Mac), other mortgage-backed securities (MBS), collateralized mortgage obligations (CMOs) and asset-backed securities (ABS), generally trade in the over-the-counter market rather than on a securities exchange. The Fund may value these portfolio securities by utilizing quotations from bond dealers, information with respect to bond and note transactions and may rely on independent pricing services. The Fund's pricing services use valuation models or matrix pricing to determine current value. In general, they use information with respect to comparable bond and note transactions, quotations from bond dealers or by reference to other securities that are considered comparable in such characteristics as rating, interest rate, maturity date, option adjusted spread models, prepayment projections, interest rate spreads and yield curves. Matrix pricing is considered a form of fair value pricing.

SECURITY VALUATION - CORPORATE DEBT SECURITIES

Corporate debt securities generally trade in the over-the-counter market rather than on a securities exchange. The Fund may value these portfolio securities by utilizing quotations from bond dealers, information with respect to bond and note transactions and may rely on independent pricing services to assist in determining a current market value for each security. The Fund's pricing services uses independent quotations from bond dealers and bond market activity to determine current value.

SECURITY VALUATION - SENIOR SECURED CORPORATE LOANS

Senior secured corporate loans with floating or variable interest rates generally trade in the over-the-counter market rather than on a securities exchange. The Fund may value these portfolio securities by utilizing quotations from loan dealers and other financial institutions, information with respect to bond and note transactions and may rely on independent pricing services to assist in determining a current market value for each security. These pricing services may utilize independent market quotations from loan dealers or financial institutions and may incorporate valuation methodologies that incorporate multiple bond characteristics. These characteristics may include dealer quotes, issuer type, coupon, maturity, weighted average maturity, interest rate spreads and yield curves, cash flow and credit risk/quality analysis.

SECURITY VALUATION - MUNICIPAL SECURITIES - MATRIX PRICING (FAIR VALUATION)

Municipal securities generally trade in the over-the-counter market rather than on a securities exchange. The Fund's pricing services use valuation models or matrix pricing to determine current value. In general, they use information with respect to comparable bond and note transactions, quotations from bond dealers or by reference to other securities that are considered comparable in such characteristics as rating, interest rate and maturity date. Matrix pricing is considered a form of fair value pricing.

SECURITY VALUATION - OPTIONS

The Fund values portfolio securities underlying actively traded call options at their market price as determined above. The current market value of any

option the Fund holds is its last sale price on the relevant exchange before the Fund values its assets. If there are no sales that day or if the last sale price is outside the bid and ask prices, the Fund values options within the range of the current closing bid and ask prices if the Fund believes the valuation fairly reflects the contract's market value.

VALUATION - FOREIGN SECURITIES - COMPUTATION OF U.S. EQUIVALENT VALUE

The Fund generally determines the value of a foreign security as of the close of trading on the foreign stock exchange on which the security is primarily traded, or as of the close of trading on the NYSE, if earlier. The value is then converted into its U.S. dollar equivalent at the foreign exchange rate in effect at the close of the NYSE (generally 1:00 p.m. Pacific time) on the day that the value of the foreign security is determined. If no sale is reported at that time, the foreign security will be valued within the range of the most recent quoted bid and ask prices. Occasionally events (such as repatriation limits or restrictions) may impact the availability or reliability of foreign exchange rates used to convert the U.S. dollar equivalent value. If such an event occurs, the foreign exchange rate will be valued at fair value using procedures established and approved by the board of trustees.

VALUATION - FOREIGN SECURITIES - POTENTIAL IMPACT OF TIME ZONES AND MARKET HOLIDAYS

Trading in securities on foreign securities stock exchanges and over-the-counter markets, such as those in Europe and Asia, may be completed well before the close of business on the NYSE on each day that the NYSE is open. Occasionally, events occur between the time at which trading in a foreign security is completed and the close of the NYSE that might call into question the availability (including the reliability) of the value of a foreign portfolio security held by the Fund. As a result, the Fund may be susceptible to what is referred to as "time zone arbitrage." Certain investors in the Fund may seek to take advantage of discrepancies in the value of the Fund's portfolio securities as determined by the foreign market at its close and the latest indications of value attributable to the portfolio securities at the time the Fund's NAV is computed. Trading by these investors, often referred to as "arbitrage market timers," may dilute the value of the Fund's shares, if such discrepancies in

security values actually exist. To attempt to minimize the possibilities for time zone arbitrage, and in accordance with procedures established and approved by the board of trustees, the managers monitor price movements following the close of trading in foreign stock markets through a series of country specific market proxies (such as baskets of American Depositary Receipts (ADRs), futures contracts and exchange traded funds).

These price movements are measured against established trigger thresholds for each specific market proxy to assist in determining if an event has occurred that might call into question the availability (including the reliability) of the values of foreign securities between the times at which they are determined and the close of the NYSE. If such an event occurs, the foreign securities may be valued using fair value procedures established and approved by the board of trustees. In certain circumstances these procedures include the use of independent pricing services. The intended effect of applying fair value pricing is to compute an NAV that accurately reflects the value of a Fund's portfolio at the time that the NAV is calculated, to discourage potential arbitrage market timing in Fund shares, to mitigate the dilutive impact of such attempted arbitrage market timing and to be fair to purchasing, redeeming and existing shareholders. However, the application of fair value pricing procedures may, on occasion, worsen rather than mitigate the potential dilutive impact of shareholder trading.

In addition, trading in foreign portfolio securities generally, or in securities markets in a particular country or countries, may not take place on every NYSE business day. Furthermore, trading takes place in various foreign markets on days that are not business days for the NYSE, and on which the Fund's NAV is not calculated. Thus, the calculation of the Fund's NAV does not take place contemporaneously with the determination of the prices of many of the foreign portfolio securities used in the calculation. If events affecting the last determined values of these foreign securities occur (determined through the monitoring process described above), the securities will be valued at fair value determined in good faith in accordance with the Fund's fair value procedures established and approved by the board of trustees.

SHARE CLASSES

Class 1, Class 2, Class 3 and Class 4 shares of the Funds are identical except that Class 2, Class 3 and Class 4 each have a distribution plan or “rule 12b-1” plan, as described below for Class 2 shares and in their respective prospectuses for Class 3 and Class 4 shares. Class 3 shares may assess a 1.00% redemption fee, as described in the prospectuses for Class 3 shares.

Distribution and service (12b-1) fees. Class 2 has a distribution plan, sometimes known as a rule 12b-1 plan, that allows the Fund to pay distribution fees to those who sell and distribute Class 2 shares and provide services to shareholders and Contract Owners. Because these fees are paid out of Class 2's assets on an on-going basis, over time these fees will increase the cost of an investment, and may cost you more than paying other types of sales charges. While the maximum amount payable under most Funds' Class 2 rule 12b-1 plan is 0.35% per year of the Fund's Class 2 average daily net assets, the board of trustees has set the current rate at 0.25%. However, Franklin Strategic Income Securities Fund, Templeton Developing Markets Securities Fund, Templeton Foreign Securities Fund and Templeton Global Bond Securities Fund each have a maximum rule 12b-1 plan fee of 0.25% per year. A portion of the fees payable to Franklin Templeton Distributors, Inc. (Distributors) or others under the rule 12b-1 plan may be retained by Distributors for distribution expenses.

Subject to applicable law, the board of trustees may from time to time, without the approval, vote or consent of shareholders of the Fund or any class, combine, merge or otherwise consolidate the shares of two or more classes of shares of the Fund with and/or into a single class of shares of the Fund, with such designation, preference, conversion or other rights, voting powers, restrictions, limitations as to dividends, qualifications, terms and conditions of redemption

and other characteristics as the board of trustees may determine. Such transactions may be effected through share-for-share exchanges, transfers or sales of assets, shareholder in-kind redemptions and purchases, exchange offers, or any other method approved by the board of trustees.

ADDITIONAL POLICIES

Please note that the Fund maintains additional policies and reserves certain rights, including:

- The Fund may restrict, reject or cancel any purchase orders, including an exchange request.
- At any time, the Fund may establish or change investment minimums.
- The Fund may make material changes to or discontinue the exchange privilege on 60 days' notice to insurance company or Fund of Fund shareholders, or as otherwise provided by law.
- Purchases of shares of the Fund (including the purchase side of an exchange) may be made only when such shares are eligible for sale in the appropriate state or jurisdiction.
- In unusual circumstances, we may temporarily suspend redemptions or postpone the payment of proceeds, as allowed by federal securities laws.
- For redemptions over a certain amount, the Fund may pay redemption proceeds in securities or other assets rather than cash if the manager determines it is in the best interest of the Fund, consistent with applicable law.
- To permit their investors to obtain the current price, participating insurance companies and Funds of Funds are responsible for transmitting all orders to the Fund promptly.

Questions

FOR MORE INFORMATION

For information on the Fund, including a free copy of the Fund's prospectus and Statement of Additional Information, and the Fund's Annual and Semiannual Reports, contact your financial advisor or the insurance company offering your Contract.

Shares of the Fund are offered generally only to insurance company separate accounts to serve as the investment vehicle for variable insurance contracts (Contracts) and to Funds of Funds; they and are not offered to the public. Because of this, the Fund's offering documents and shareholder reports are not available on our public website at franklintempleton.com.

Not all Funds and classes are available in all Contracts. For information on the terms of investment in a Contract, please consult the Contract prospectus that accompanies this Fund prospectus.

You can learn more about the Fund in the following documents:

Annual/Semiannual Fund Reports to Shareholders

Include a discussion of recent market conditions and Fund strategies that significantly affected Fund performance during its last fiscal year, financial statements, detailed performance information, portfolio holdings and, in the annual report only, the Independent Registered Public Accounting Firm's report.

STATEMENT OF ADDITIONAL INFORMATION
